CHIREX™ HPLC CHIRAL COLUMNS

World-Class Chiral Separation Tools Meeting Your Demands for:

Chiral separations are extremely important to the pharmaceutical and biotechnology industries, as well as most other areas of natural products chemistry. Optically active therapeutic drugs require selective and sensitive techniques. New government regulations also continue to spur and require the development of rapid, accurate and reproducible methods for the analysis and purification of enantiomeric compounds.

The challenge is to provide selective yet versatile HPLC columns for both trace analysis and the purification of bulk drug.

PHENOMENEX meets these challenges with CHIREX brand HPLC columns. CHIREX is available in 12 different stationary phases. These chemically rugged, versatile columns are used for the direct and indirect resolution of enantiomeric amines, alcohols, carboxylic acids, hydroxy acids, amino acids, ketones, lactones, ethers, esters, and other biologically active compounds. The table below describes the 12 different chiral stationary phases available in the CHIREX line.

CHIREX™ HPLC COLUMN TECHNOLOGY

All CHIREX brand analytical columns are available in 5 μ particle size. Preparative columns and bulk media are also available in 15 and 30 μ particle sizes. Narrow particle size distributions, combined with our advanced column packing methodology, results in highly stable beds

and uniformly-packed CHIREX columns. Our proprietary bonding process leads to excellent chemical stability. The table below provides additional technical data.

CHIREX™ Series Technical Data and Specifications Sheet

Chiral Method Development Kits

If you are doing method development or you are not sure which CHIREX stationary phase to select, Phenomenex offers two (2) kits, each containing five short 50 x 4.6mm columns for screening and rapid analysis.

KIT A For Pharmaceuticals, Agrochemicals

The broad range of Pirkle-concept (Type I, or brush type) columns carefully chosen for this Kit will enable the chiral chromatographer to quickly and easily survey stationary phase utility and separation conditions for a wide variety of enantiomeric compounds. Used with normal phase solvent systems, these latest generation chiral columns are highly efficient tools particularly well-suited for enantiomeric separations of pharmaceuticals and agrochemicals.

Kit A. For Pharmaceuticals, Agrochemicals

This kit contains five columns, 50 x 4.6mm:

Column 1: Chirex 3001: 3,5-dinitrobenzoic acid derivative of (R)-phenylglycine

Column 2: Chirex 3005: 3,5-dinitrobenzoic acid derivative of (R)-1-naphthylphenylglycine

Column 3: Chirex 3010: 3,5-dinitroaniline derivative of (S)-valine

Column 4: Chirex 3014: (R)-1-(α -naphthyl)ethylamine derivative of (S)-valine

Column 5: Chirex 3020: (R)-1-(α -naphthyl)ethylamine derivative of (S)-tert-leucine

For α -Amino Acids, α -Hydroxy Acids, Carboxylic Acids, Aromatic Amines, Alcohols and Amino Alcohols

KIT B

This Kit contains a collection of chiral columns for method development of enantiomeric α -amino acids, α -hydroxy acids, and aromatic amines, alcohols and amino alcohols. The kit includes four Pirkle-concept columns and one ligand-exchange type column. The Pirkle-concept columns are chosen for their high utility/versatility in separating derivatized amino acids, whereas the ligand-exchange column offers excellent enantioselectivity for underderivatized α -amino acids, and α -hydroxy acids.

Kit B. For α -Amino Acids, α -Hydroxy Acids, Carboxylic Acids, Aromatic Amines, Alcohols and Amino Alcohols

This kit contains five columns, 50 x 4.6mm:

Column 1: Chirex 3010: 3,5-dinitroaniline derivative of (S)-valine

Column 2: Chirex 3011: 3,5-dinitroaniline derivative of (S)-tert-leucine

Column 3: Chirex 3012: 3,5-dinitroaniline derivative of (R) phenylglycine

Column 4: Chirex 3014: (R)-1-(α -naphthyl)ethylamine derivative of (S)-valine

Column 5: Chirex 3126: Ligand-Exchange type based on (N,S) diocetyl-(D)-penicillamine complexed with copper(II)

THERMASPHERE™ TS-430

For improved Chiral Reproducibility, You Need Constant Temperature. You Need a Column Chiller/Heater

ThermaSphere™ TS-430 Column Chiller/Heater

4°C to 70°C

- Improves chiral reproducibility and chromatographic results
- Improves baseline and overall detector performance
- Improves peak efficiency
- Capacity to hold four (4) 30cm columns up to 1" outer diameter (up to 21.2mm ID)

Temperature range/readability/accuracy/stability

Temperature readability is 0.1°C and accuracy is 0.2°C over the entire range from 4.0°C to 70.0°C. The unit features single point electronic calibration for accuracy that is easily reset by the user to agree with local laboratory standards. The display can be changed from temperature to timer with a single keystone on the tactile touch membrane.

Design

Completely solid state and integrated, the only moving parts in the unit are the chamber fan and the cooling fan, making the design of the TS-430 truly reliable. Easy to install, the unit requires minimal bench-top space for the benefits it provides. Being Peltier based, it has no compressors or CFCs to worry about and is extremely energy efficient.

The four mounting posts for the columns are located on the inside door of the unit. This allows easy, unobstructed access to the columns, valves, and fittings. Columns are held to the posts by solvent-resistant Buna-N™ O-rings making mounting and changing columns easy.
