# United States Pharmacopeia

## Allowable Adjustments General Chapter <621>

This guide provides analysts with solutions to standard USP monographs and allows the incorporation of cutting edge and reproducible HPLC column technology to provide shorter separation times and improved resolution while meeting all the quality standards of the USP for years to come!

### LC – Isocratic Elution

Component	United States Pharmacopeia (USP)
Stationary Phase	No change of the identity of the substituent permitted. <ul style="list-style-type: none"> <li>• No replacement of C18 by C8</li> <li>• Other physico chemical characteristics must be similar</li> <li>• Change from totally porous (TPP) to superficially porous particles (SPP) is allowed</li> </ul>
Particle Size and Column Length	Particle size (dp) and/or column length (L) can be adjusted, if the L/dp ratio remains constant or in the range between -25 % and +50 %. When switching to Core-Shell particles, other combinations of L and dp can be used, if the number of theoretical plates (N) is between -25 % and +50 % of the original column.
Column Internal Diameter	Can be adjusted as wanted. <ul style="list-style-type: none"> <li>• If a smaller internal diameter (ID) or particle size is used, extra column band broadening may need to be minimized by factors such as instrument connection, detector cell volume, sampling rate and injection volume</li> </ul>
Flow Rate	± 50 % (after the adjustment due to changes in column ID and particle size) <ul style="list-style-type: none"> <li>• When particle size or column internal diameter is changed (e.g. from 4.6 mm ID and 5 µm at 1.0 mL/min to 3.0 mm ID and 3 µm), the flow rate is adjusted using the following equation:</li> </ul> $F_2 = F_1 \times \frac{dc_2^2 \times dp_1}{dc_1^2 \times dp_2} = 1.0 \times \frac{3.0^2 \times 5}{4.6^2 \times 3} = 0.71 \text{ mL/min}$
Column Temperature	± 10 °C (where the operating temperature is specified).
Composition of the Mobile Phase	± 30 % (relative) for minor components, but no component is altered by more than 10 % absolute. A minor component comprises less or equal than (100/n) %, n being the total number of components of the mobile phase.
Mobile Phase pH	± 0.2
Concentration of Salts in the Buffer	± 10 %
Detector Wavelength	No adjustment permitted.
Injection Volume	When the column dimensions are changed, the following equation may be used for adjusting the injection volume: $V_{Inj2} = V_{Inj1} \times \frac{L_2 \times dc_2^2}{L_1 \times dc_1^2}$ <p>Even in the absence of any column dimension change, it may be varied if the system suitability criteria remain within their established acceptability limits.</p>

### LC – Gradient Elution

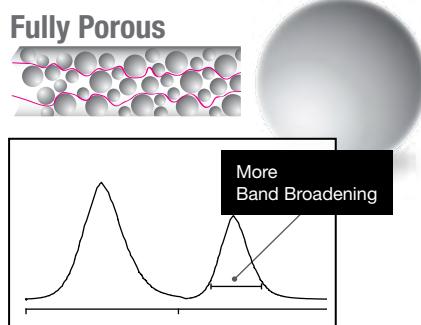

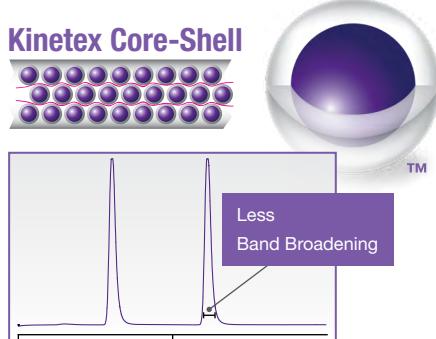

Component	United States Pharmacopeia (USP)
Stationary Phase	No change of the identity of the substituent permitted.
Particle Size and Column Length	Particle size (dp) and/or column length (L) can be adjusted, if the L/dp ratio remains constant or in the range between -25 % and +50 %. <ul style="list-style-type: none"> <li>• When switching to Core-Shell particles, other combinations of L and dp can be used, if the ratio (tR/Wh)2 is between -25 % and +50 % of the original column, for each peak used to test the system suitability.</li> </ul>
Column Internal Diameter	Can be adjusted as wanted.
Flow Rate	Is adjusted if column internal diameter and particle size is changed. <ul style="list-style-type: none"> <li>• When changing the column from 4.6 mm ID with 5 µm particle size at 2.0 mL/min to 2.1 mm ID with 3 µm particle size, the flow rate is adjusted using the following equation:</li> </ul> $F_2 = F_1 \times \frac{dc_2^2 \times dp_1}{dc_1^2 \times dp_2} = 2.0 \times \frac{2.1^2 \times 5}{4.6^2 \times 3} = 0.7 \text{ mL/min}$
Gradient Volume	When changing the column dimension, each gradient segment volume is adjusted by means of the gradient time using the following equation: $t_{G2} = t_{G1} \times \frac{F_1}{F_2} \times \frac{L_2 \times dc_2^2}{L_1 \times dc_1^2} = 3 \text{ min} \times \frac{2.0}{0.7} \times \frac{100 \times 2.1^2}{150 \times 4.6^2} = 3 \text{ min} \times 0.4 = 1.2 \text{ min}$
Column Temperature	± 5 °C (where the operating temperature is specified).
Composition of the Mobile Phase + Gradient	Adjustments of the composition of the mobile phase and the gradient are acceptable, if: <ul style="list-style-type: none"> <li>• The system suitability criteria are fulfilled</li> <li>• The principal peak(s) elute(s) within ± 15 % of the indicated retention time(s). This requirement does not apply when the column dimensions are changed</li> <li>• The first peaks are sufficiently retained and the last peaks are eluted</li> </ul>
Mobile Phase pH	± 0.2
Concentration of Salts in the Buffer	± 10 %
Dwell Volume	Gradient time points (t in min) can be adapted to compensate differences in dwell volume between the system used for method development (D0 in mL) and that actually used (D in mL). The adapted time points (tc in min) at the current flow rate (F in mL/min) can be calculated using the following equation: $t_c = t - \frac{(D - D_0)}{F} = 1 \text{ min} - \frac{(1.0 \text{ mL} - 0.5 \text{ mL})}{1 \text{ mL/min}} = 0.5 \text{ min}$
Detector Wavelength	No adjustment permitted.
Injection Volume	When the column dimensions are changed, the following equation may be used for adjusting the injection volume: $V_{Inj2} = V_{Inj1} \times \frac{L_2 \times dc_2^2}{L_1 \times dc_1^2}$ <p>Even in the absence of any column dimension change, injection volume may be varied if the system suitability criteria remain within their established acceptability limits</p> <p>When the injection volume is decreased, special attention is given to (limit of) detection and repeatability of the peak response(s). An increase is permitted, if the linearity and resolution of the peak(s) to be determined remain satisfactory</p>

### Why Choose Kinetex Core-Shell Columns?

- Performance Gains on Any LC System
- System-to-System and Lab-to-Lab Reproducibility
- Improve the Productivity of Older, Established Methods

### Make the Easy-Switch to Kinetex!

### USP Technical Notes

Click Each!

- Reduce Run Times Without Re-Validation
- Achieve Higher Resolution
- Stay Within Allowable Adjustment
