

dSEC

Size Exclusion Chromatography Columns

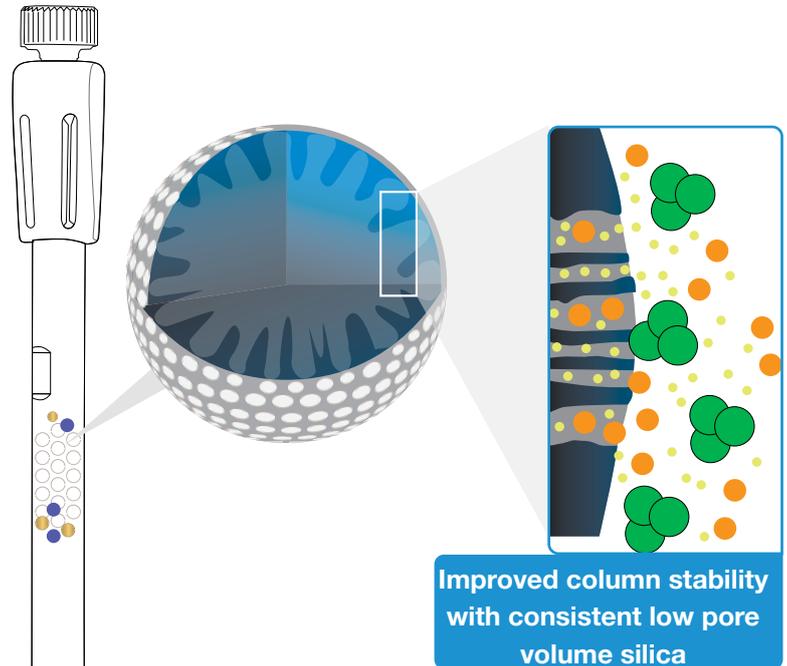

- Exceptionally Robust SEC Particle
- Extreme Stability and Exceptional Lifetime
- Reproducible Separations

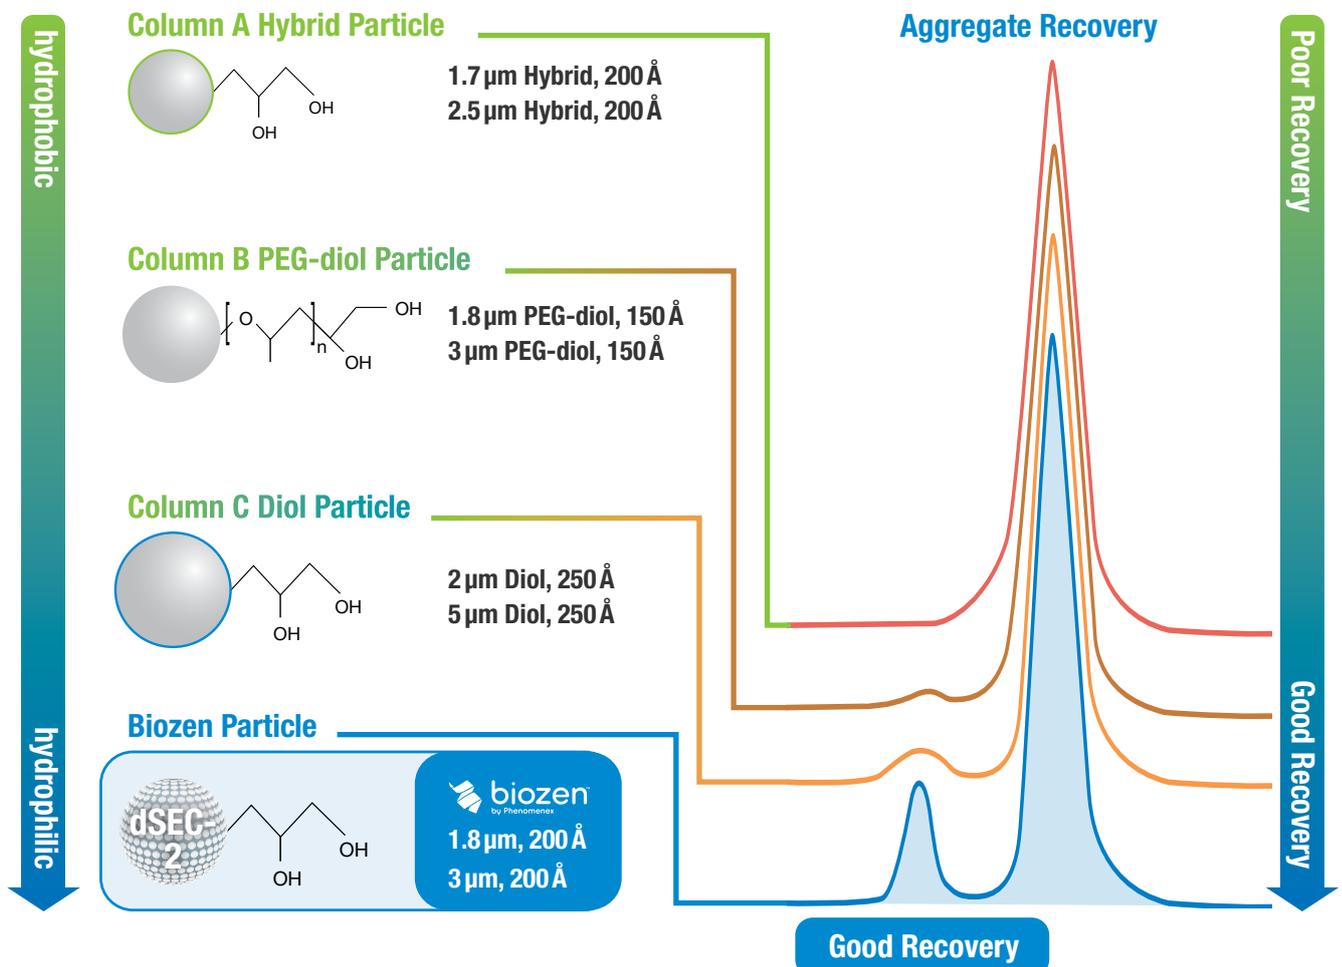

Advanced SEC Silica Particle Technology and Surface Chemistry for Characterizing Biomolecules

Biozen dSEC Proprietary Silica Particle Technology

The Biozen dSEC columns are packed with low pore volume silica coupled with a proprietary hydrophilic diol-type bonded surface chemistry that prevents the silica surface from interacting with protein samples.

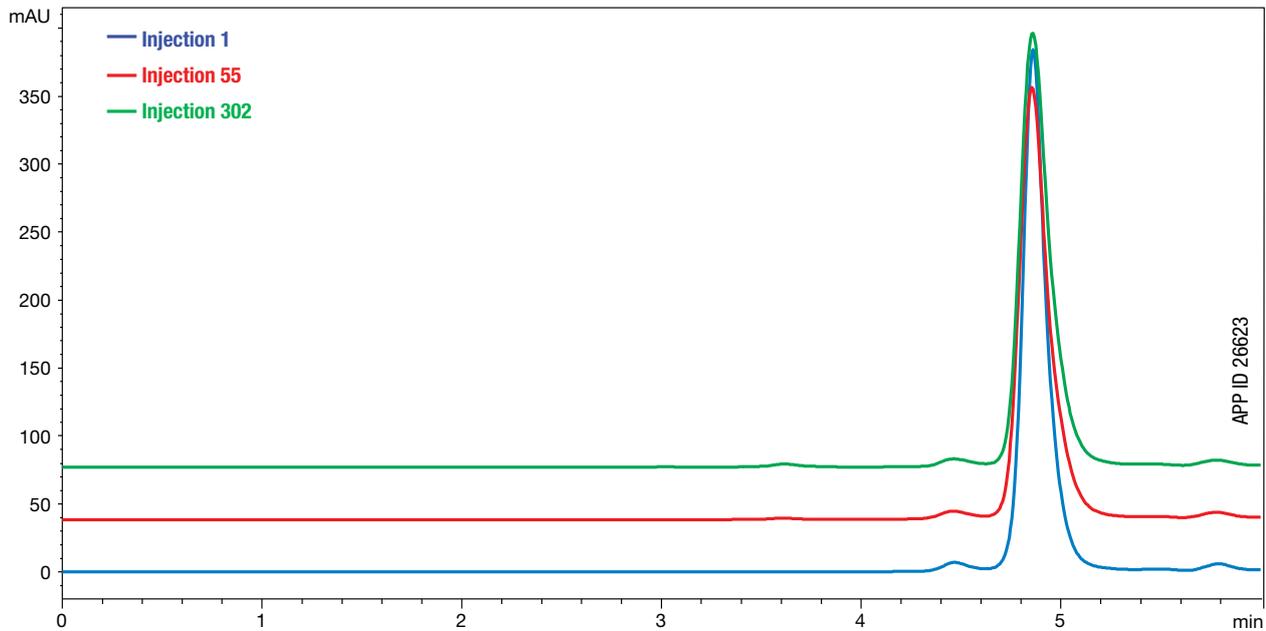

Biozen dSEC Hydrophilic Surface Chemistry Improves Aggregate Analysis

Improved Column Lifetime and Performance Stability

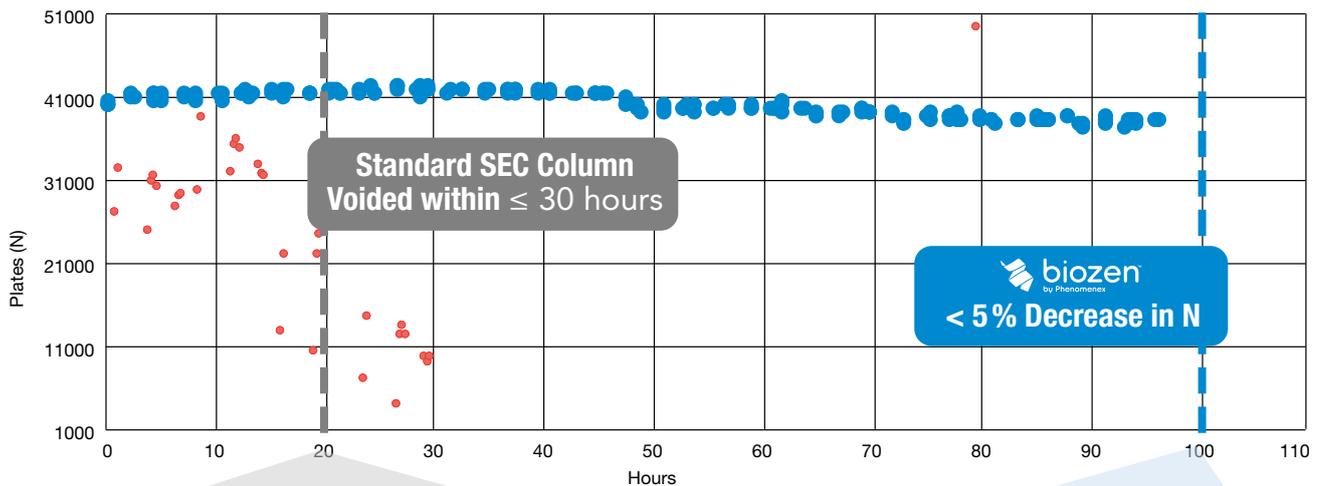

Phenomenex's optimized SEC column loading technology has significantly improved the overall packing density and silica distribution of the columns leading to improved chromatographic lifetime and stability.

Unchanged Performance After 300 Injections

Unchanged Performance After 100 Hours of Extreme Running Conditions

- Efficiency, Uridine (Biozen dSEC-2, 1.8 μm , 200 \AA)
- Efficiency, Uridine (SEC Column 1.8 μm)

Premature Failure with Standard Silica

High pore volume silica cannot withstand rigorous running conditions, leading to **erratic results** and eventually formation of column "void", leading to **premature failure**.

Biozen SEC Consistent Results

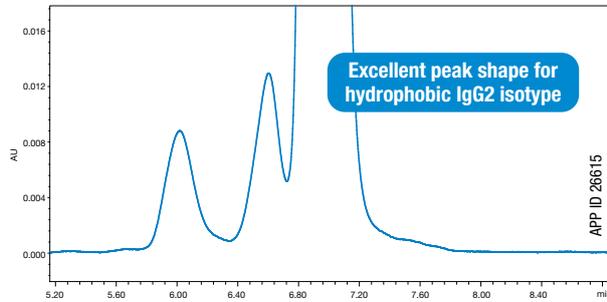

> 50% increase in column stability versus standard SEC column media

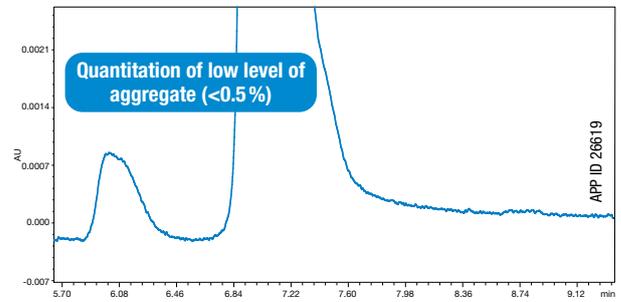

New Standard for Platform SEC Methods

Whether IgG2 or IgG4 isotypes, bispecifics, or Fc-Fusions, dSEC-2 provides excellent separation and sample recovery for many different classes of antibodies and related recombinant proteins.

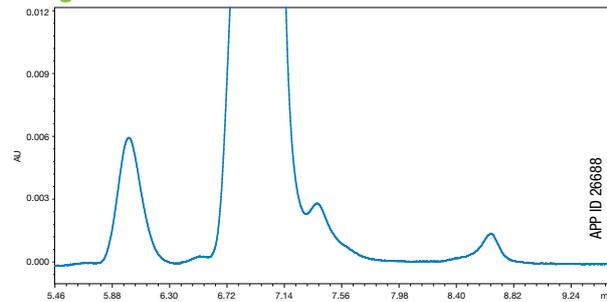

IgG2 Panitumumab

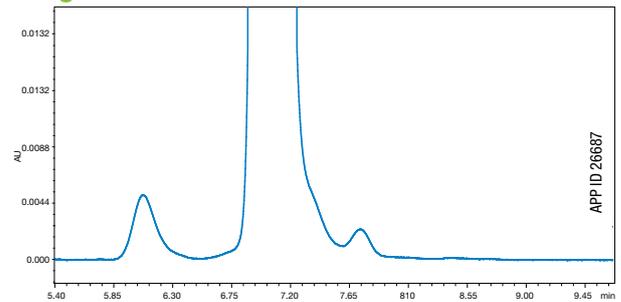

Bispecific Emicizumab

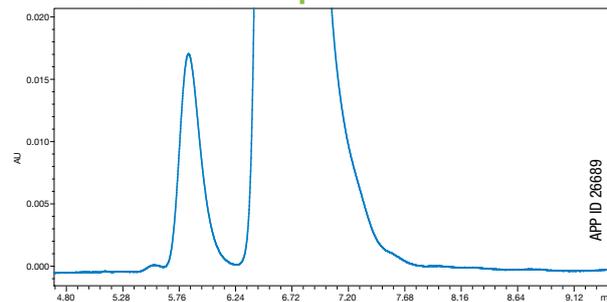

IgG4 Nivolumab

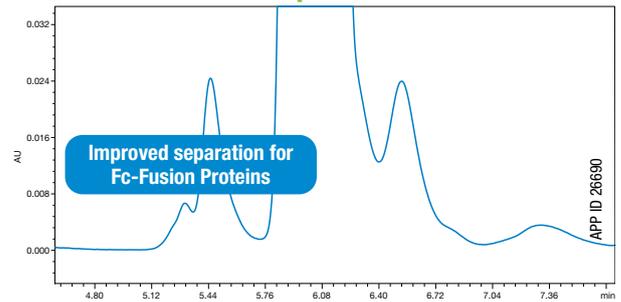

IgG2 Denosumab

Fc-Fusion Aflibercept

Fc-Fusion Etanercept

Conditions for all applications:

Column: Biozen 1.8 μ m dSEC-2, 200 Å

Dimension: 300 x 4.6 mm

Part No.: [00H-4787-E0](#)

Mobile Phase: 200 Potassium Phosphate + 250 mM KCl, pH 6.2

Flow Rate: 0.35 mL/min

Injection Volume: 10 μ L

Detector: UV @ 280 nm

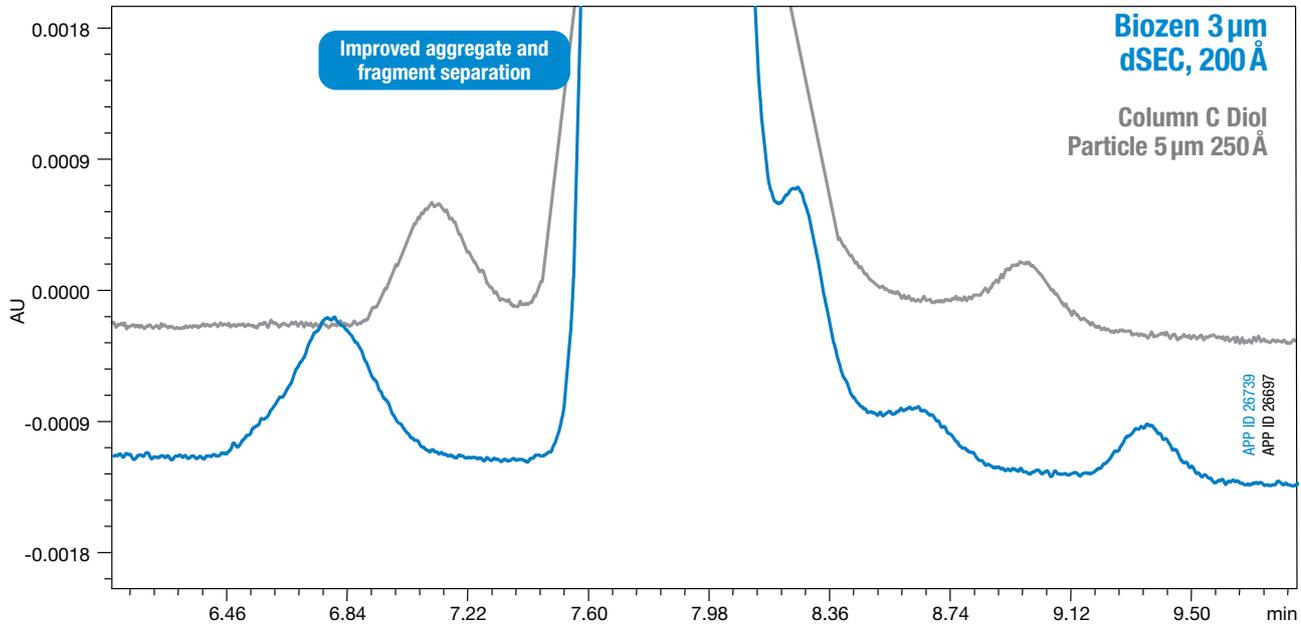

Temperature: 25 °C

Sample: Various, 10 mg/mL

Improved Aggregate Recovery and Separation

Although many silica-based SEC columns use similar stationary phases and nominal pore diameters, pore structure and surface chemistry vary significantly. Biozen dSEC-2 columns provide the optimum pore volume and surface chemistry that has been finely tuned for monoclonal antibodies and related formats.

Trastuzumab

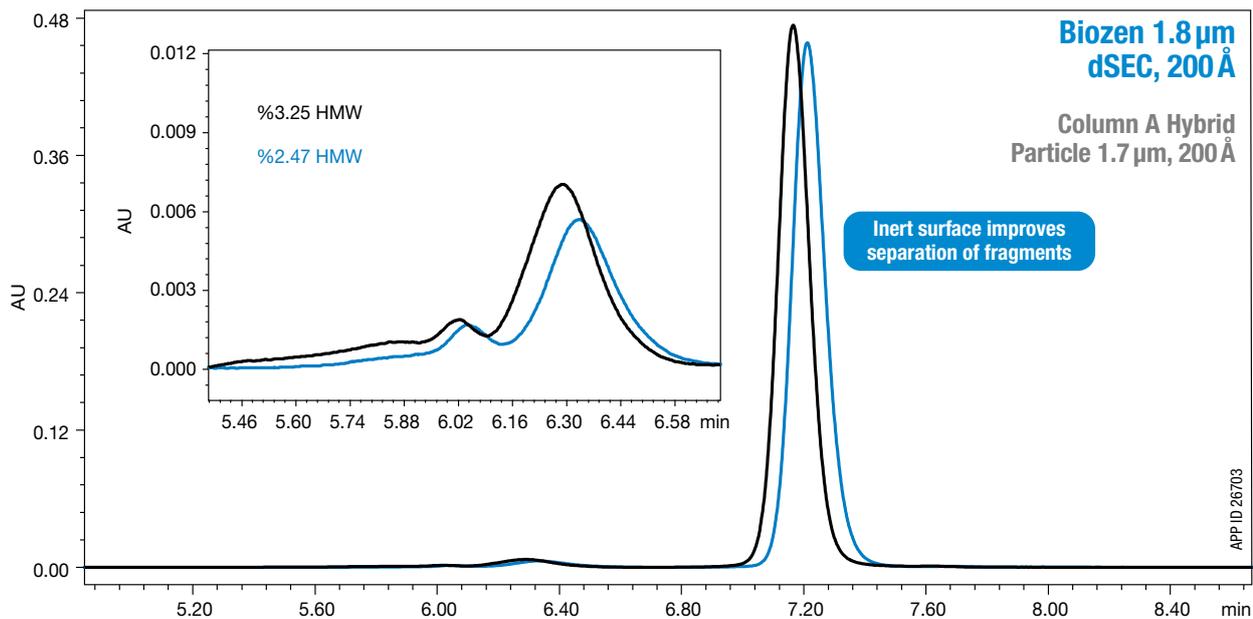

Conditions for both columns:

Columns: Biozen™ 3 μm dSEC-2, 200Å
Column C 5 μm 250Å
Dimension: 300 x 7.8mm
Part No.: 00H-4788-K0 (Biozen)
Mobile Phase: 50 mM Sodium Phosphate +
300 mM NaCl, pH 6.8

Flow Rate: 1.0 mL/min
Injection Volume: 10 μL
Temperature: 25 °C
Detector: UV @ 280 nm
Sample: Trastuzumab, 10 mg/mL

NIST mAb

Conditions for both columns:

Columns: Biozen™ 1.8 μm dSEC-2, 200Å
Column A 1.7 μm, 200Å
Dimension: 300 x 4.6mm
Part No.: 00H-4787-E0 (Biozen)
Mobile Phase: 200 Potassium Phosphate +
250 mM Potassium Chloride pH 6.2

Flow Rate: 0.35 mL/min
Injection Volume: 10 μL
Temperature: 25 °C
Detector: UV @ 280 nm
Sample: NIST mAb, 10 mg/mL

Biozen SEC Applications

The newest addition to the Biozen portfolio brings a unique combination of **improved silica particle mechanical strength** and column stability resulting in exceptional reproducibility and performance to withstand the rigors of modern aggregate analysis.

Biozen Column Material Characteristics

Phases	Description	Pore Size (Å)	Surface Area (m ² /g)	Carbon Load (%)	pH stability	Shipping Solvent	Max Pressure (psi/bar)	Temp (°C)	Mode of Analysis
Biozen 1.8 µm dSEC-2	Inert, high-strength porous particle for the separation and quantitation of monoclonal antibody aggregate and fragments	200	–	–	2.5-7.5	0.1 M Sodium Phosphate, pH 6.8 w/ 0.025 % NaN ₃	8000/570	50	SEC/GFC
Biozen 3 µm dSEC-2	Inert, high-strength porous particle for the separation and quantitation of monoclonal antibody aggregate and fragments	200	–	–	2.5-7.5	0.1 M Sodium Phosphate, pH 6.8 w/ 0.025 % NaN ₃	4000/285	50	SEC/GFC
Biozen 1.7 µm Oligo	The particle is an organo-silica core-shell bonded with a C18 stationary phase	100	200	11	1-12	Acetonitrile/Water (60:40)	15000/1050	60	RP
Biozen 2.6 µm Oligo							8700/600	60	RP
Biozen 2.6 µm Glycan	Provides optimal combination of high efficiency and selectivity for released glycans, suitable for HPLC and UHPLC.	100	200	–	2-7.5	Acetonitrile /0.1 M Ammonium Formate, pH 3.2 (90:10)	8700/600	60	HILIC
Biozen 1.6 µm Peptide PS-C18	Excellent retention by combined positively charged surface ligand and C18 ligand, contains a positively charged weak base that repels basic ions, suitable for use with UHPLC.	100	260	9	1.5-8.5 ***	Acetonitrile/Water (65:35 v/v)	15000/1030	90*	RP
Biozen 3 µm Peptide PS-C18	Excellent retention by combined positively charged surface ligand and C18 ligand, contains a positively charged weak base that repels basic ions, suitable for use with HPLC.						5000/340	90*	RP
Biozen 1.7 µm Peptide XB-C18	Overall retention of both acidic and basic peptides through C18 stationary phase with di-isobutyl side chains, suitable for use with UHPLC.	100	200	10	1.5-9 **	Acetonitrile/Water (65:35 v/v)	15000/1050	90*	RP
Biozen 2.6 µm Peptide XB-C18	Overall retention of both acidic and basic peptides through C18 stationary phase with di-isobutyl side chains, suitable for use with HPLC and UHPLC.						8700/600		RP
Biozen 3.6 µm Intact XB-C8	Large pore core-shell particle for fast intact and subunit biological entry. C8 provides highly useful moderate hydrophobic selectivity.	200	25	–			8700/600		RP
Biozen 2.6 µm WidePore C4	Core-shell particle with butyl stationary phase and optimal wide pore size distribution for better resolution of large biologics, including monoclonal antibodies and subunit analysis.	400	25	–			12500		RP
Biozen 6 µm WCX	Monodispersed, non-porous PS-DVB particle with a hydrophilic graft and linear carboxylate polymer chain for the separation of acidic/basic variants for proteins.	–	–	–	2-12	20 mM Sodium Phosphate + 150 mM NaCl 4 mM NaN ₃ , pH 6.5	6000	60	IEX

* Temperature limits are dependent on method running parameters. Suggested max temperature for these Biozen LC columns is 90°C, however temperature limits are dependent on your running parameters. Running at a pH greater than 8 and elevated temperature will compromise column lifetime. Continuous use of Biozen columns at the maximum temperature limit may compromise column longevity.

** pH range is 1.5 - 9 under gradient conditions. pH range is 1.5 -10 under isocratic conditions.

*** pH range is 1.5 - 8.5 under gradient conditions. pH range is 1.5 -10 under isocratic conditions

Chromatography Service and Support

Accelerate your Biopharmaceutical journey with our expertise and support

Our technical support scientists handle scientific questions regarding a wide variety of applications and techniques, from supporting the discovery of new applications to optimizing protocols — as well as troubleshooting your experiments.

Phenomenex A Danaher Life Sciences Company

Every day, scientists around the world are tackling chronic diseases and infections at the cellular level to understand causes, identify treatments and test new drugs and vaccines. Danaher's Life Sciences companies make this leading-edge scientific research possible at clinical research facilities, academic institutions, and government agencies. Our capabilities extend beyond research with the world's most advanced filtration, separation, and purification technologies, which power the creation of biopharmaceuticals, microelectronics, and more.

Innovation Defines Our Future

- One of the most important ways Danaher drives continuous improvement is through innovation that makes a difference.
- Customers look to us to find opportunities and define the future—to deliver innovative products, service, and solutions that address their most pressing needs.
- Innovation is our ultimate competitive differentiator. We pursue out-of-the box ideas, both large and small, to add value and advance innovation.
- We improve people's lives by delivering technologies that matter. By helping our customers achieve amazing things, we enhance quality of life around the world.

The Potential To Make a Difference

Danaher's innovative companies are developing leading edge diagnostic tools, and advancing life-saving scientific research

Introducing A New Solution for Your mAbs and Aggregate Analysis with Biozen dSEC Column

NEW dSEC

Biozen dSEC
1.8 μm and 3 μm

4 Particle Platforms

Pore Controlled Technology

Thermally Modified Fully Porous

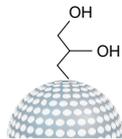

Core-Shell Technology

Monosized Polymeric Non-Porous

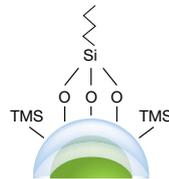

dSEC

Biozen dSEC
1.8 μm and 3 μm

Inert, high-strength porous particle for the separation and quantitation of monoclonal antibody aggregate and fragments

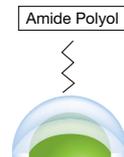

Intact

Biozen WidePore C4
2.6 μm

Core-shell particle with butyl stationary phase and optimal wide pore size distribution for better resolution of large biologics, including monoclonal antibodies and subunit analysis.

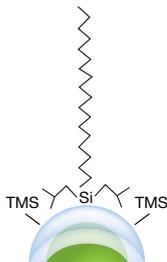

Glycan

Biozen Glycan
2.6 μm

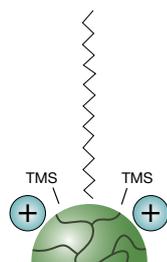

Provides optimal combination of high efficiency and selectivity for released glycans.

Peptide

Biozen Peptide XB-C18
1.7 μm and 2.6 μm

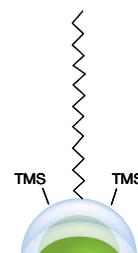

Overall retention of both acidic and basic peptides through C18 stationary phase with di-isobutyl side chains.

Biozen Peptide PS-C18
1.6 μm and 3 μm

Excellent retention by combined positively charged surface ligand and C18 ligand.

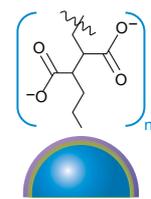

Oligonucleotides

Biozen Oligo
1.7 μm and 2.6 μm

Organo-silica core-shell particle bonded with a C18 stationary phase offers high selectivity for even minute oligo differences alongside high and low pH robustness.

Ion-Exchange

Biozen WCX
6 μm

Monosized particles grafted with linear polycarboxylate chains to envelop and separate proteins from acidic/basic variants
