## Column Reproducibility and Robustness using the bioZen™ Nano 2.6 µm XB-C18 LC Column

### MS/MS Conditions

#### Overview

Column to column and batch to batch reproducibility is an important performance attribute in nano LC. Without reproducible columns, it could become necessary to repeat all of the injections in the batch of runs in order for retention times to be compared if a single column fails. Furthermore, robust columns that are able to perform hundreds of injections without any degradation in chromatography is also of key importance. In this application we show reproducible results across multiple columns as well as the robust ability of the bioZen 2.6 µm XB-C18 column after 100 injections.
